

How far up is Cyber Security on your board's agenda?

“

For most of the past 10 years, firms have struggled to get executives and non-IT business owners to take an interest in understanding and engaging about Cyber risks. Cyber security is finally reaching the board room of financial firms

What is the biggest Cyber Risk for your firm?

With all the phishing attacks impacting everyone in the business it feels like this is the biggest risk, however insider threat is the one which security professionals often fear the most

Which part of the overall business wide management process are you most worried about?

- Prevention
- Detection
- Response
- Not sure

Financial Firms have to put significant amount of emphasis on Business Continuity yet the response plan to a major cyber attack is still not treated with the same level of importance

What is most driving increased awareness of Cyber Security for your organisation?

- Increased media attention
- Increased due diligence from clients
- Increased regulatory attention (GDPR)
- Increased number of internal incidents
- Increased senior management accountability (SMCR)
- Increased proliferation of technology
- Other

“

The number of internal security incidents here is small however they have increased significantly and businesses are often the last to know they've been the victim of a data breach

In which area are you currently most prepared in your business?

- Security Organisation (Leadership/Skills/Budget)
- Security Awareness - training of staff
- Policy and Procedures
- Technical Security Controls (Firewalls etc.)

It's of no surprise that we feel most prepared in our technical security defences, but hackers don't need to test those sophisticated controls if the people are the weakest link
