

Lanware Services Overview

As your trusted IT partner, Lanware takes care of your technology so that you can concentrate on your core business.

Lanware provides a complete choice of outsourced IT services – all tailored to the needs of the financial services sector.

As a team that understands technology in a financial business context, Lanware can go beyond infrastructure support to act as a trusted advisor on strategic direction, industry trends and how technology can meet your changing needs.

Total Technology Outsourcing

Change the way your company engages with technology with our Total Technology Outsourcing service. From your infrastructure to your applications, from support to cloud storage, Lanware can manage, govern and secure every aspect of your technology. Unlock the advantages of cloud-based 'all encompassing' outsourcing without the cost, risk or complexity of implementing and managing it yourself.

"We provide a complete choice of outsourced IT services – all tailored to the needs of the financial services sector."

Lanware Managed Cloud – The Lanware Managed Cloud turns your desktop, infrastructure and applications into a single, simplified service that's available from anywhere with an Internet connection. Tailored for financial services, it frees you from managing an in-house infrastructure.

Service Desk – The Lanware Service Desk is staffed 24*7 with customer-focused engineers who understand your business, bring strong technical insight and follow ITIL best practice to deliver service excellence – a single point of contact that quickly resolves technical issues.

End User Technology – Workplaces are no longer traditional desktop-based environments. Lanware provides both the technology and the service wrap including best practices such as unified endpoint management which will secure and control end user technology in a connected, cohesive manner.

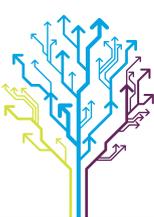

Enterprise Mobility Management – The user delivery of mobile applications presents opportunities for Financial Services firms. Lanware has specialist expertise in leading technology solutions such as Airwatch, getting the balance between containerised data security and a rich ease of use experience.

Office 365 & Productivity – Businesses are shifting to the Public Cloud to access productivity tools. Regulated firms need to adopt these services in a secure, compliant manner and Lanware ensures business productivity benefits are realised whilst also managing the risks.

Infrastructure-as-a-service – Lanware removes the overhead and complexity of internally owned and managed server platforms. IaaS can either be fully managed compute and virtual servers, or resources can be made available via a self-service portal - ideal for the development community.

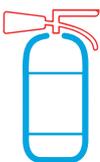

Infrastructure Applications – Lanware can manage your core identity, and infrastructure application, saving you time and money, while maximising performance and availability.

vDesktop – With the Virtual Desktop service, every user retains the familiar desktop experience they know – with the advantage of new flexibility. Each virtualised desktop is located within a secure container, hosted in Lanware's datacentre, available on any device, any location.

Unified Communications – Lanware's Unified Comms brings together telephony, video and collaboration tools under one reliable, flexible service, where user productivity and business processes are enhanced. Costs can be reduced by focusing management and security on a single unified infrastructure.

Disaster Recovery – Financial firms must manage operational risk and in a disaster situation recover the business in known timeframes whilst operating critical functions. As all our clients are in the financial sector, Disaster Recovery receives a significant amount of focus.

Professional Services – Lanware offers professional services focused on core competencies such as End User Computing, Enterprise Mobility Management, Virtual Desktop Infrastructure and Cyber Security helping you reduce the over-head on in-house project teams and gain access to specific best practice.

Darktrace Cyber Detection – Lanware, an early adopter of more advanced Machine Learning Cyber technology from Darktrace, provides threat intelligence reporting combined with real-time detection and response all with the contextual knowledge of client's technology and operational environment.

Public Cloud – Financial firms are looking to hyper-scale Cloud providers such as Microsoft, Amazon and Google in a secure, compliant manner. Lanware provides access as a "cloud broker" through its Data Centre 'hubs' and hybrid cloud platform, dynamically moving work-loads.

vCloud – Lanware's Community vCloud lets you take advantage of a flexible on-demand infrastructure that's been specifically developed by an FCA regulated client – without the expense of developing your own.
